ITC293 - Introduction to the Web

Assessment item 3 - HTML CSS and Design

Files Submitted

- index.html
- at_A3_about.html
- at_A3_resume.html
- at_A3_web_skills.html
- css/portfolio.css

1. Website Overview

This project is a portfolio website for BrewMaster Barista Academy. The website is based on a coffee training business and contains four pages:

- Home
- About
- Resume
- Web Skills

The website was created using HTML and CSS only. One external CSS file was used for all pages.

2. HTML Structure

Each page follows the same structure:

- Header
- Navigation bar
- Main content
- Footer

The header contains the logo and website title.

The navigation bar links all four pages together.

The pages include:

- Text
- Images
- Lists
- Tables
- Links

Semantic HTML tags such as header, nav, main, section, and footer were used to organise the content.

3. CSS Design

All styling is stored in portfolio.css.

No inline CSS or internal <style> tags were used.

Colors

The website uses brown, cream, and white colors to match the coffee theme.

Fonts

Arial font was used because it is simple and easy to read.

Layout

A wrapper class was used to keep the content centered on the page.

Spacing, padding, and margins were added to improve readability.

4. Navigation Bar

The navigation links were styled as CSS buttons.

CSS properties used include:

- background-color
- padding
- border
- border-radius
- hover
- transition

The current page is highlighted using the active class.

5. Images

Images were added to the Home and About pages.

The images were centred using a CSS class and styled with:

- max-width
- border-radius
- height: auto

A logo was also added and used as the favicon.

6. Tables and Skill Bars

Tables were used on the Resume and Web Skills pages.

The tables use:

- borders
- padding
- background colours
- zebra striping

Skill bars were created using CSS div elements with different widths.

7. Print Media Query

A print stylesheet was added using @media print.

When the page is printed:

- the navigation bar is hidden
- backgrounds are removed
- text becomes black
- links display their URLs

This makes the pages easier to print and read on paper.

8. Navigation Map

Home

|

|--- About

|

|--- Resume

|

|--- Web Skills

All pages are connected through the navigation bar.

9. Folder Structure

```
at_A3_portfolio/  
|  
|-- index.html  
|-- at_A3_about.html  
|-- at_A3_resume.html  
|-- at_A3_web_skills.html  
|  
|-- css/  
|   |-- portfolio.css  
|  
|-- images/  
|   |-- logo.svg  
|   |-- coffee.jpg  
|   |-- latte.jpg
```

10. Testing

The website was tested before submission.

Tests completed

- Navigation links work
- Images load correctly
- CSS works on all pages
- Tables display properly
- Print layout works
- HTML validation completed
- CSS validation completed

11. Changes from Assessment 2

Changes made in Assessment 3:

- Added CSS navigation buttons

- Added tables
- Added skill bars
- Added print stylesheet
- Added favicon/logo
- Improved page styling
- Removed internal CSS

12. Reflection

This assessment helped me improve my understanding of HTML and CSS.

I learned how to:

- use external CSS properly
- style navigation buttons
- create tables
- use print media queries
- organise page layouts better

The print style sheet was something new that I had not used before.

I also learned more about spacing and layout while trying to make all pages look consistent.

If I continue working on this website later, I would like to learn JavaScript and make the website more interactive.

Overall, this assessment helped me become more comfortable using HTML and CSS.
